

## **REPLACEABLE BATTERY TRACKING COLLAR ( QTXR or QTXD ) OPERATING INSTRUCTIONS**

1. QTXD: If not already installed, install the supplied CR123A Lithium battery. Make sure that the positive end (will have the hump raise) goes in towards the antenna. If you install the battery backwards, the collar will not operate but it will not be damaged. Battery life is over 700 hours. You will find these batteries in any drug store or Wal-Mart or you may order them from us. Make sure that you dispose of used batteries properly.
2. QTXR: If not already installed, install the Lithium Ion rechargeable battery. This battery will give you about 300 hours of battery life. Always make sure that the battery is fully charged before hunting. When using the quick charger, please note that if a discharged battery is being charged, the LED indicator light will be orange. When the battery is charged, it will indicate green. A battery can be left in the charger indefinitely without being damaged. The rechargeable battery can be recharged up to 500 times. The charge time is less than 3 hours.
3. The transmitter is off when the supplied magnet is slid into the slot between the top of the transmitter and the collar. Use only the silver colored (rare earth) magnet to turn off this collar. Do not use the black colored

(ceramic) magnet supplied with the original sealed Quick Track collars, as it is not strong enough to shut off the changeable battery collars. You may also remove the battery or untwist the battery cap a few turns to turn it off. Remove the magnet to activate the transmitter inside the collar for tracking your dog. A small amount of Vaseline on the threads of the battery cap “O” Ring will allow for easy cap removal and ensure that the battery compartment remains water tight after many year of use.
